## **DETAILED ACTION**

### ***Allowable Subject Matter***

Claims 1-10 are allowed. The following is an examiner's statement of reasons for allowance: As noted in the specification (especially at pages 4-5, but not limited to these pages), the claimed inventions are meant to be within the situation of the integrated chip system rather than a computer program. This is illustrated, among others, from the recitation of "component" in claims. In other words, the circuit according to the invention and the associated method according to the invention increase the access time, i.e., the time between the start of an access attempt and the enabling or execution of a function of the electronic device, for example of a chip, in the case of unauthorized access operations. As a result, a DP (differential power) analysis is effectively prevented because the time required for it is increased to such an extent that it is virtually impossible to carry out. When the means provided for an authorized access are used in accordance with the regulations, the number and the frequency of the access operations to the electronic device are not restricted. At the same time, the method or the use of the circuit is highly tolerant to access attempts which fail owing to inadvertent operator errors or equipment faults. This is illustrated from at least one aspect of the claimed invention in which the period of time necessary to match is prolonged rather than completely locking out access for all situations. The prior art did not teach or suggest the particular features of the claims.

***Conclusion***

***Points of Contact***

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
